

Tax advisors lose revenue when client oversight slips

The Pain

→ Too many clients, too little visibility

25–120+ clients per advisor – proactive client care is impossible to do manually.

→ Advisory opportunities go unnoticed

UG-to-GmbH conversions, VAT threshold breaches – caught only at year-end, if at all.

→ Always reactive, never ahead

Reactive by default – firms lose advisory revenue and client satisfaction as a result.

Who has this problem?

Role

- Tax advisors & partners in accounting firms
- Firm owners & client engagement leads

Firm size

- All sizes: solo practice to mid-market
- Most acute: 10–50 clients per advisor

Industry

- Tax & Audit – Germany (100,000+ firms)
- Scalable across the EU

What they do today

✗ Review each client manually, one by one

Every client checked separately – time-consuming, error-prone, not scalable.

✗ Issues only surface at year-end close

Relevant events are caught too late – or not at all.

✗ No CRM for advisory opportunities

DATEV & Co. offer no proactive alerts – firms “stumble” across opportunities by chance.

✗ Reactive advice is the default

Client calls – advisor responds. Proactive outreach barely happens.

How SollMate Opportunities works

A CRM that turns synced DATEV data and advisor notes into a billable advisory engagement — automatically.

Why act now

THE SQUEEZE

Demand is up. Capacity isn't.

- Soaring demand for advice, but no new advisors to hire.
- Manual, per-client work simply doesn't scale.
- Firms that can't speed up lose ground to those that do.

THE UNLOCK

AI can now run advisory autonomously.

- AI handles the analysis and drafting end-to-end.
- One advisor now serves far more clients proactively.
- Higher throughput at a materially higher service margin.

The window is open now: AI lets firms scale advisory and grow margin — before competitors do.

Market Sizing

Bottom-up — tax advisors in Germany

Total Addressable Market

€31.6M

53,800 firms × €588/year

Serviceable Addressable Market

€9.4M

~16,000 tech-savvy firms × €588/year

Year 1-2 Target

€294K

500 firms × €588/year

Year-1 target

500 firms

Our marketing channels

	LinkedIn — Problem-First Content Weekly posts on real tax firm pain points. No branding — value first. Target audience: tax advisors aged 30–50.	Inbound
	Meta Ads — Facebook Direct targeting of the 30–50 demographic. Lookalike audiences built from existing contacts. CPC-optimized for demo requests.	Paid
	Cold Outreach — Chamber Lists All German states publish licensed tax firms publicly. 500 personalized emails → 50 calls → 5–10 pilots.	Outbound
	DATEV Partner Network IT resellers serve 30–50 firms each. One referral deal gives instant access to warm leads — no cold outreach needed.	Partner
	DStV & BStBK Conferences Regional meetups and annual conferences of German tax advisor associations. A 10-min slot or sponsorship puts you in front of decision-makers.	Events

ROLLOUT PLAN

Week 1–4 Chamber Lists + LinkedIn DMs → First 5 conversations
Week 4–8 Facebook Ads + LinkedIn Posts → Build inbound pipeline
Month 3+ DATEV Partner Network → Scale to 50 customers

8,000+	500	50	< 4 wks

A young market, and we have the edge

Only two early players today — and neither is building on a scalable engine.

THE FIELD TODAY

Steuerboard Agents

Agent-based tooling for tax workflows — promising, but point solutions without an underlying data engine.

Ballo.io

Early entrant in the space — building feature-first, with no scalable architecture to grow on.

WHY SOLLMATE WINS

We know how to build the engine

A scalable rules-plus-agent architecture — not point features bolted on after.

Deep tax & accounting expertise

We understand DATEV, the workflows and where the billable opportunities are.

The right team to execute

Domain fluency and the engineering to ship it — fast.

The market is wide open — the winner is whoever pairs a scalable engine with real tax domain depth. That's us.

AI built by people who understand finance

Maurice

Tech-Lead & CEO

- Researcher at heart: MSc thesis on Deep Neural Networks
- Hands-on builder — architected Daidalus' full AI & data stack from scratch
- Track record in financial analytics across private and public market clients
- Passionate about making finance infrastructure actually intelligent

maurice@sollmate.eu

Sandra

FP&A-Lead & CFO

- Deep understanding of financial reporting across public, private and regulated environments
- Navigates complex multi-jurisdictional accounting structures with ease
- Co-founded Daidalus while raising three kids – the definition of execution under pressure
- Knows how a clean close looks – and builds systems to get there

sandra@sollmate.eu

Mikolaj

AI Developer

- Passionate AI developer
- Built the SollMate deep agent platform from scratch
- Go-to person when things are broken and need fixing – fast, excels under pressure
- Dedicated to building the first AI native operation engine for tax advisory firms
